

Factsheet Brugg Cables

Brugg Group

In 1896, Gottlieb Suhner founded a cable factory in Brugg, and it eventually developed into the Brugg Group. Today, approximately 2000 employees make sure that a variety of products are produced with a high level of expertise. They include cable systems for power transmission and distribution, special cables for industry and security, rope technology for tourism, transportation, industry and construction; piping systems for geothermal heating systems and the transport of fluids; and process-control systems for water and energy supplies, process and environmental engineering as well as hydroelectric plants. The Brugg Group consists of five divisions with 50 companies spread across 20 countries along with representative offices in every important industrial country.

Brugg Cables

After its founding in 1896, Brugg Kabel AG, which operates under the name Brugg Cables, developed into the largest company within the Brugg Group and into one of the leading cable manufacturers in Switzerland. Brugg Cables has an international presence. With a product line that ranges from high-voltage cable rated up to 500 kV and all the associated connector technology to medium and low-voltage cable, up to cable for power service at construction sites. In doing so, Brugg Cables is one of the few cable manufacturers anywhere in the world that is successful in manufacturing cables and accessories for what it currently the highest voltage level of 500 kV. Its internal R&D department is continually working on new and innovative products. In close collaboration with its customers, Brugg Cables also develops custom-tailored system solutions, for example, large turnkey projects involving the cabling of electricity generating plants.

In the Business Unit Industry Cable Systems, Brugg Cables specialises in the manufacture of customer-specific cable systems for wind power, e-mobility, and machinery engineering. From the initial concept through to the finished solution, specialists work hand in hand with customers on the development of solutions.
